

CALTRANS CONTINUES WORK ON PROJECTS TO REPAIR DELTA BRIDGES

Motorists traveling through the Delta this summer may experience delays as the California Department of Transportation continues work on the Steamboat Slough and Paintersville Bridges.

This project will repair the concrete counterweights and approaches on both bridges. Beginning July 17, motorists will be subject to intermittent traffic controls and bridge closures Monday through Thursday and bridge closures will take place during daylight hours on Tuesday, Wednesday and Thursday.

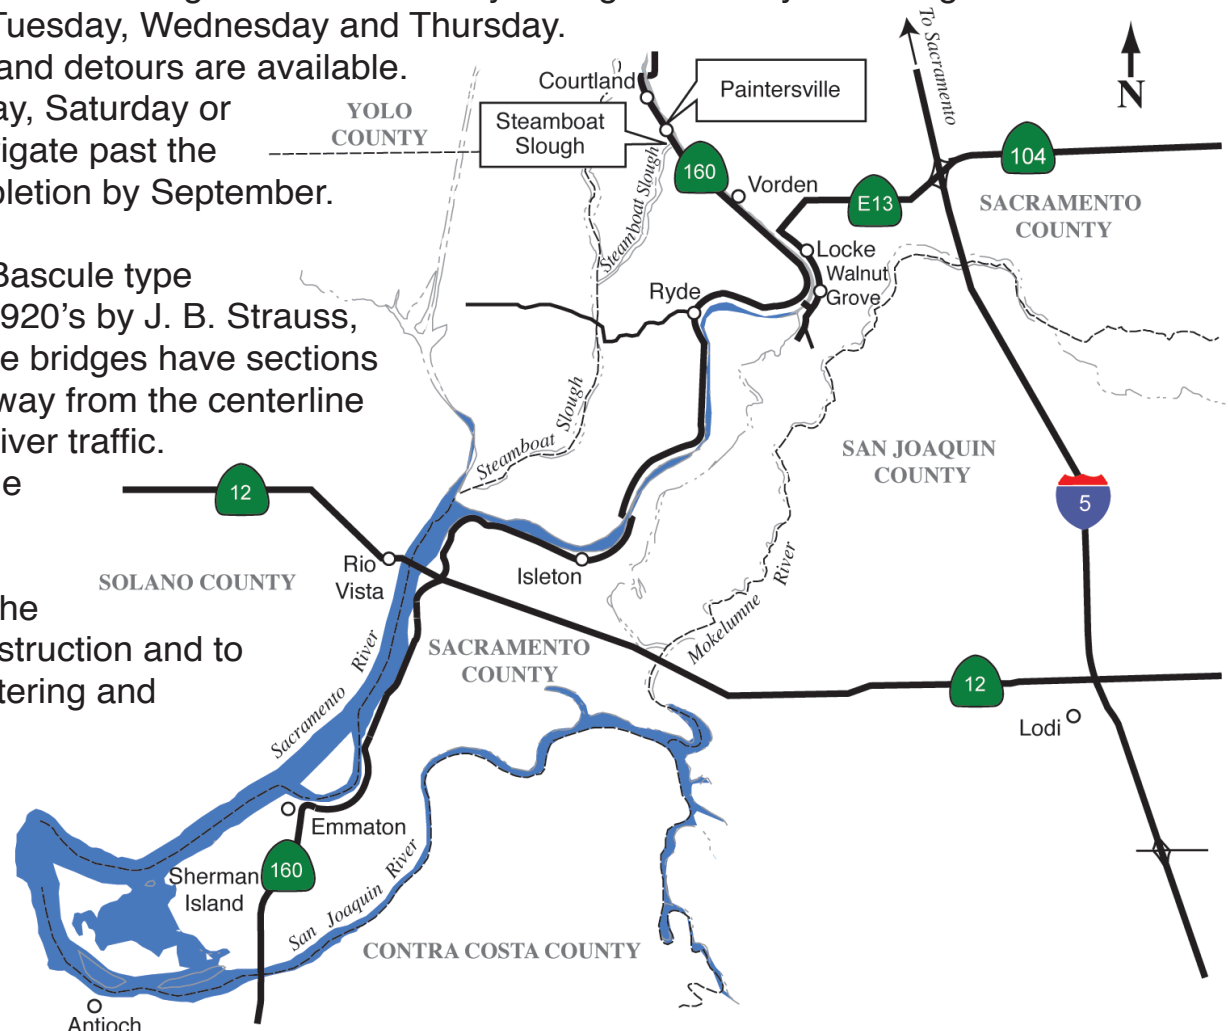

Only one bridge will be closed at a time and detours are available.

No traffic-interfering work will occur Friday, Saturday or Sunday. Marine traffic will be able to navigate past the closures. All work is scheduled for completion by September.

The bridges are Strauss Heel Trunnion Bascule type bridges, which were constructed in the 1920's by J. B. Strauss, the "Father of the Golden Gate". Bascule bridges have sections called "leaves" that rotate upward and away from the centerline of the river, providing clear passage for river traffic. These bridges are eligible for listing in the National Register of Historic Places.

Caltrans reminds motorists to "Slow for the Cone Zone" when traveling past the construction and to be alert for personnel and equipment entering and exiting the work area.

For more information, please call Mark Dinger at (530) 741-4572.
